The Polaroid 600 camera's design, while seemingly simple, incorporates several key features that contribute to its iconic status. Its straightforward operation belies its ability to produce truly unique and captivating photographs.

- **The Shutter Button:** A simple press of the large,

centrally located shutter button initiates the exposure process. The camera automatically controls the aperture and shutter speed, making the process effortless.

- **The Flash:** An integral flash is automatically activated with each shot, ensuring sufficient illumination even in low-light conditions. This built-in flash is a key component ensuring consistently bright and well-exposed images, especially critical with Polaroid 600 film's sensitivity.
- **The Film Compartment:** Accessing the film compartment is straightforward. A simple latch mechanism allows for easy loading and unloading of Polaroid 600 film. Remember to always check the film counter to ensure you have sufficient exposures remaining. This is crucial to prevent wasting expensive Polaroid 600 film.
