Beginner Exercises:

Exercise 1: Calculate the Area of a Rectangle: Write a C# program that takes the length and width of a rectangle as input from the user and calculates its area.

Solution:

```
```csharp
using System;

public class RectangleArea
{
 public static void Main(string[] args)

 Console.WriteLine("Enter the length of the rectangle:");
 double length = double.Parse(Console.ReadLine());

 Console.WriteLine("Enter the width of the rectangle:");
 double width = double.Parse(Console.ReadLine());

 double area = length * width;

 Console.WriteLine("The area of the rectangle is: " + area);
 }
}
```

**Exercise 2: Check if a Number is Even or Odd:** Write a C# program that takes an integer as input from the user and determines whether it's even or odd.

**Solution:**

```
```csharp
using System;

public class EvenOddChecker
{
    public static void Main(string[] args)
    {
        Console.WriteLine("Enter an integer:");
        int number = int.Parse(Console.ReadLine());
        if (number % 2 == 0)

        Console.WriteLine(number + " is even.");

        else

        Console.WriteLine(number + " is odd.");

    }
}
...

```

Intermediate Exercises: (Focus on **Data structures in C#**)

Exercise 3: Reverse a String: Write a C# program that takes a string as input and reverses it.

Solution: Using `string.Reverse()` method for simplicity:

```
```csharp
using System;

public class StringReverser
{
 public static void Main(string[] args)

 Console.WriteLine("Enter a string:");
 string inputString = Console.ReadLine();
 string reversedString = new string(inputString.Reverse().ToArray());
 Console.WriteLine("Reversed string: " + reversedString);

}
...

```

**Exercise 4: Implement a Stack using a Generic List:** Demonstrate the use of a generic List to create a stack data structure, implementing push and pop operations. This touches on **C# fundamentals** and **data structures in C#**.

```

```csharp
using System;
using System.Collections.Generic;

public class MyStack
{
    private List stack = new List();

    public void Push(T item)

    stack.Add(item);

    public T Pop()
    {
        if (stack.Count == 0)

        throw new InvalidOperationException("Stack is empty");

        T item = stack[stack.Count - 1];
        stack.RemoveAt(stack.Count - 1);
        return item;
    }
}
```

```

### Advanced Exercises: (Incorporating **Object-Oriented Programming in C#** and **C# Algorithms**)

**Solution:** (Simplified example)

```

```csharp
public class Animal
{
    public string Name get; set;
    public int Age get; set;
    public virtual void MakeSound() Console.WriteLine("Generic animal sound");
}

public class Dog : Animal
{
    public override void MakeSound() Console.WriteLine("Woof!");
}

public class Cat : Animal
{
    public override void MakeSound() Console.WriteLine("Meow!");
}
```

```
